

Metric ID: 6.5.2 Detailed report of Collaborative "quality" initiatives with other institution(s) i.e. programs conducted on Quality in collaboration with other organizations - NIRF certificate

With the help of neighbouring institutions, we could go for capacity building and skill enhancement of our students: (It is included in 3.5.1 for the year 2021-22)

1. MoU with Genomix is a great boon to our Zoology combination students. It offers them to be acquainted with new laboratory equipments and the process of preparing vaccine. During the internship, students prepared herbal chocolates and a paper was published.

ABSTRACT: Chocolate is an incredibly stable substance that, under normal circumstances, will last forever. The physical-chemical characteristics of chocolate made from native cocoa beans were compared to those of commercial chocolate, and the physical-chemical characteristics of cocoa beans were investigated after fermentation, drying, roasting and grinding. We looked at the sample nibs' moisture, ash, fat, fiber, protein and tannin content. India's chocolate sector has made significant progress. India is home to numerous cocoa producers that provide a wide range of industrial and domestically produced chocolate-based goods. For the purpose of producing chocolate, cocoa beans are used to make cocoa powder and its byproducts. Therefore, their disposal could cause problems with the environment and the economy. For novel and useful dishes, cocoa powder may be a valuable component or additive. In the context of a circular economy, the value-adding of food byproducts is more important. A source of fiber (around 50% w/w), proteins, minerals, vitamins, and a wide variety of polyphenols., cocoa beans are also a possible supply. The purpose of this review is to examine the chemical and nutritive makeup of cocoa bean powder used in the production of chocolates and to re-evaluate the numerous uses that have been suggested in order to maximize the value of this byproduct for use in food, livestock feed, industrial applications, as well as critical care medicine. Studies reporting the bio-functional potential of cocoa powder for human health, such as antibacterial, antiviral, anti-carcinogenic, anti-diabetic, or neuroprotective activity, benefits for the cardiovascular system, or an anti-inflammatory capability, will receive particular attention.

Keywords: Chocolates, Cocoa by-product, Human health bioactivity, Flavonoids.

We could organize Seminars and Demo for our Students

With Plantigen, we could arrange internship on “Tissue Culture – G9 Banana grown in this Region”

We also organize Seminar with the help of Plantigen

With HoneySys, we could arrange Campus Selections

Respected Sir,

Sub: Request to accord permission and train our students for their internship – Oct'2022-Reg

This is to bring to your kind consideration that as per the New Education Policy (NEP) – as it is implemented in our State, each student has to undergo an internship at the end of their IV Semester. The following students have volunteered to do their internship in your Company. Since, we have MoU with you, it be good if you accord permission and train them. Kindly confirm it.

Collaboration is usually for Field Visits, internships, to make use of the Lab equipments and getting experts to conduct seminars – **Most of these are covered under student centric methods and capacity building)**

A few sample copies of the internships are shown above.
